PIONEER COMMUNICATIONS ADDS FOURTH TIME & TEMPERATURE SERVICE

Pioneer Communications continues replacement of aging time and temperature equipment in its western Kansas markets.

Pioneer has ordered replacement equipment to continue providing the popular time, temperature and weather community service in Syracuse, KS. where competing equipment from Audichron[®] has been located for many years.

It was the successful and satisfactory operation of similar units during the past year that resulted in the choice of the WeatherFone[®] GPS for Syracuse. Pioneer first became familiar with the WeatherFone[®] brand during the summer of 2003 when competing equipment was replaced in Hugoton, KS. It was during this past year that Pioneer also replaced competing equipment in its hometown of Ulysses, KS. and also in nearby Lakin, KS. with the WeatherFone[®].

Like many communications companies nowadays, Pioneer also provides Internet, wireless and cable TV in its markets.
